

Password Protection on Guarding Expert Mobile

Enabling Password Protection

Steps:

1. Click  and select Configuration to enter the Configuration interface.

2. Click **Password Protection** and then set the switch of **Password Protection** as on to enter the password settings interface.
3. Enter the password for the software and confirm it to activate the password protection.

Next time, if you want to run the software after exit, you need to enter the password to log in first.

Changing the Password:

Click **Password Protection** and then click **Modify Password** and enter corresponding information to change the password.
